DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 14 and 21 are rejected under 35 U.S.C. 102(e) as being anticipated by Dockus et al. (US 2006/0027625 A1).

Dockus teaches a method of bonding with a transient liquid phase consumable insert (10) comprising a sheath having an upper and lower Ni layer (16) and a ductile melting point depressant (Si or Zn) in the center (12). See figure 1 and paragraphs 22, 37-40 and 44. The insert is captured between two workpieces and heated to a temperature sufficiently high to melt the insert for a time period sufficient for the melting point depressant to diffuse into the workpieces (paragraphs 2-4 and 51).

Response to Arguments

3. Applicant's arguments with respect to claims 14 and 21 have been considered but are moot in view of the new ground(s) of rejection.

Allowable Subject Matter

4. Claims 15-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
5. Claims 1-4, 7-9 and 22 are allowed.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Bliss (USPN 3476528, braze shim, Ni center, Fe outer layers), Spencer (USPN 6984358 B2) and Cairo et al. (USPN 6098871, uniform concentration of Ni-B across thickness).
